

# EqHub

## Purpose

An industry initiative to simplify technical data and document deliveries for standard equipment.

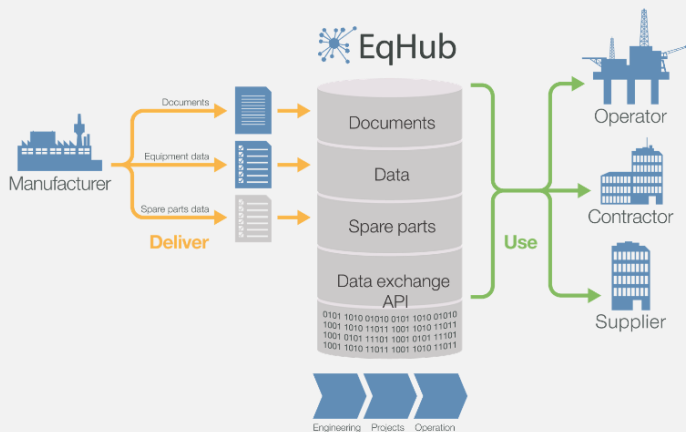

## Description

Improves quality of equipment data and documentation, and avoids non-value adding duplication.

A delivery mechanism for standard equipment data and documentation, digitalizing and simplifying deliveries. EqHub is supported by common industry requirements and formats.

Following common standards, the information is re-usable across operators and its vendors, for projects and operations.

A non-basic EPIM service, aimed at increasing efficiency and lower costs.

## Value chain impact

Pre-award	Exploration ✓	Development ✓	Operations ✓	Decomm.
-----------	---------------	---------------	--------------	---------

## Benefits

- Enables the manufacturers to deliver standard equipment data and documentation through a single source once, for re-use across the whole industry
- Reduces time spent on data and document deliveries, review and handover processes
- Improves and secures equipment data quality for supply chain and engineering processes
- Gives immediate access to equipment data and documentation
- Makes manufacturers' equipment visible throughout the supply chain
- Enables use as an internal product catalogue, in which products have been verified against common industry requirements used by contractors and operators

## Participants

- Operators on the NCS
- Contractors
- Suppliers
- Manufacturers

## Provider

**SHAREcat** SHAREcat provides unique cloud-based products for managing technical information
