

# EnvironmentHub

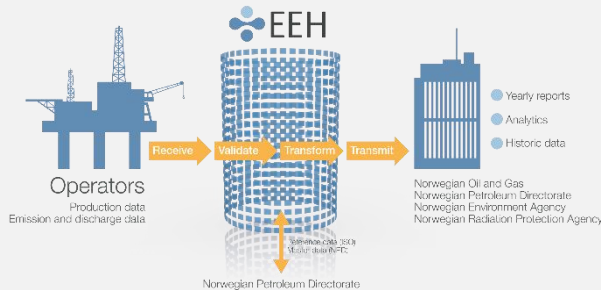

## Purpose

A national database for reporting emissions and discharges from oil gas activities on the NCS.

## Description

A service designed to comply with requirements.

Ensures that the receiving, validation and transformation of environmental data is effective and robust. The improved work processes that are implemented along with EEH, ensures increased support of efficiency and better foundation to analyze discharge trends and evaluation of effects on environmental measures.

## Benefits

- Complies with the authorities' HSE regulations for the petroleum industry
- Is flexible to meet future changes in environmental reporting requirements
- Enables validation against the NPD fact pages or other defined sources
- Provides significant flexibility, scalability and the possibility for quality assurance
- Enables the operators to report discharge data on a regular basis
- Is based on updated information from external sources to provide flexibility towards the different stakeholders in the validation process

## Participants

- All operators on the NCS
- Norwegian Petroleum Directorate
- Norwegian Environment Agency
- Norwegian Radiation Protection Agency

## Value chain impact

Pre-award	Exploration ✓	Development ✓	Operations ✓	Decomm. ✓
