

License2Share

Purpose

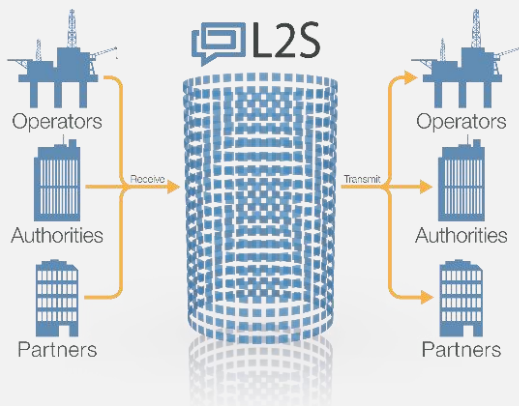

An official communication and archiving tool for administrative interaction on the NCS.

Description

A service designed to comply with requirements and increase productivity.

A solution that uses industry best practices and processes to ensure a safe and secure exchange of information within a license. The use of L2S is based on acceptance of and adherence to policy principles and common work processes.

The Norwegian Oil and Gas recommends use of L2S for all formal joint venture communication and archiving.

Value chain impact

Pre-award ✓	Exploration ✓	Development ✓	Operations ✓	Decomm. ✓
-------------	---------------	---------------	--------------	-----------

Benefits

- Meets information management requirements
- Provides standardized work processes
- Simplifies the information sharing tasks required to keep all the parties in a joint venture equally informed
- Provides secure cross company information sharing
- Prepares information for storage and retrieve ability for a period of several decades
- Integrates the authorities' observer status without requiring time consuming information requests
- Facilitates the authorities' right to observe the progress in a license, ensuring that it is both time and cost efficient

Participants

- All operators and licensees on the NCS
- Norwegian Petroleum Directorate
- Petroleum Safety Authority Norway
- Ministry of Petroleum and Energy

Providers

CGI

CGI is an international provider of end-to-end IT and business process services. The main L2S contractor, operating and maintaining the solution, as well as providing the servicedesk

OPENTEXT

OpenText is an international provider of enterprise information management software. Is a sub-contractor, providing the underlying L2S software
