

# LogisticsHub

## Purpose

The purpose of LogisticsHub is to increase visibility in the value chain, by manage sharing of tracking information of Cargo Carrying Units.

## Description

The LogisticsHub project started in April 2013, as a response to the challenges of logistic tracking in the oil and gas industry.

LogisticsHub was launched for operation summer 2016 and represents a concept for sharing tracking information for Cargo Carrying Units and equipment in the Norwegian offshore industry.

The service supports operators, rig owners, supply bases, suppliers and transporters with tracking data through the logistics chain.

Relevant tracking information will be captured along the transportation route and stored in the LogisticsHub. The stored information is available for use based on access principles.

Anyone involved in a logistics operation may access information from the LogisticsHub to gain tracking information beyond information provided by company internal solutions. The stored tracking information in LogisticsHub is based on actual events, rather than expectations.

The value of exact information in logistics can never be over rated.

## Benefits

- Enables the logistics in the oil and gas industry to become more efficient
- Allows companies operating on the NCS to operate more safe, efficient and competitive
- Simplifies the management of CCUs throughout the supply chain
- Makes search mechanisms for lost and delayed goods more effective
- Increases data quality
- Improves planning data and processes by a predictable cargo flow
- Creates new possibilities for information management with increased focus on HSE

## Participants

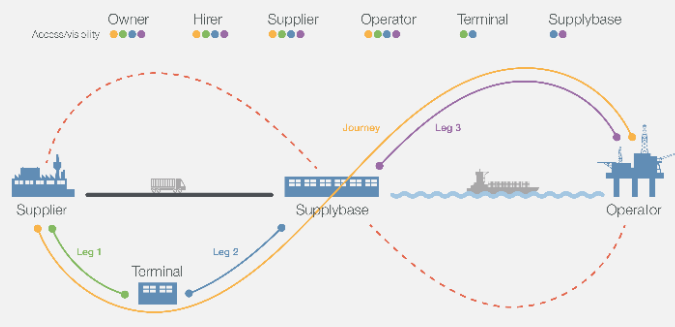

- Operators on the NCS
- Rig owners
- Suppliers of CCUs
- Supply base operators
- Equipment suppliers
- Transport providers

## Provider

**bouvet** Bouvet is a Norwegian consultancy which designs, develops and provides advice on IT solutions and digital communication.
